

BEWARE!

Your next poster printer may only use proprietary poster paper

In every poster printer model before Varitronics®' new Variquest™ Poster Maker 3600, you had a choice of shopping for your poster paper from a vendor other than Varitronics®. Not anymore. With this machine, you'll have only one choice. Why? Because they want you to only buy paper from them at their prices. No more paper color choices, no more competitive prices!

The Variquest™ Poster Maker 3600 is the Prolmage™ XL 3000 model jazzed up. A few more bells and whistles with the same scanning quality and the same DPI resolution. All for \$6000. Remember, the poster printer doesn't use any ink or toner, just paper. If you think the poster printer is expensive, just wait till you start paying Varitronics' paper prices no matter what they may go to.

So when you're making that poster printer choice, make it carefully. Ask for pricing on the Prolmage™ Plus 3000 & the Prolmage™ XL 3000 not just on the Poster Maker 3600. This way you'll have a choice of paper vendors including saving as much as 33% less than Varitronics® and their dealer's prices plus 20 different colors of poster paper to choose from.

Remember it's not what you pay for that printer today, it's what you're paying for the paper tomorrow!
